STORMWATER ANNUAL REPORT FORM

This form is for regulated small MS4s (Municipal Separate Storm Sewer Systems) and may be used to meet the annual reporting requirements for regulated small MS4s as outlined in 40 CFR§122.34g(3). While it is not required for MS4 operators to use this form to meet federal regulations, MS4s are encouraged to use this format to allow for more efficient recordkeeping and to minimize paper consumption. This form may be submitted electronically provided that a signature is either scanned or provided as a hard copy addendum to the completed report form.

This form can be downloaded from the EPA Region 8 stormwater web site, http://www.epa.gov/region8/stormwater

Completed forms may be sent to:

    Greg Davis
    Mailcode: 8P-W-WW
    1595 Wynkoop Street
    Denver, CO 80202-1129
    Email: davis.gregory@epa.gov

All sections of this form must be completed and Item I on Page 18 must be signed and certified.

Please print or type.

A. Permittee Information

Permittee (Agency Name): Fort Carson
Mailing Address: 1626 Evans Street BLDG 1219
City, State and Zip Code: Fort Carson, Colorado 80913-4000
Contact Phone Number: 719-526-1697
Permit Certification Number: COR042000F
Have any areas been added to the MS4 due to annexation or other legal means? NO

B. Reporting Period (e.g., Jan 1, 2004 to Dec. 31, 2004): January 1, 2013 to December 31, 2013
C. Construction Program Contact:

The following information will be provided on EPA’s web site to assist construction site operators in determining municipality-specific requirements for their projects:

Have you assigned an appropriate contact person/work unit to address questions regarding your municipality’s construction and post-construction requirements? YES

If Yes:

Contact name:
Position/work group title: Chief, Environmental Compliance Branch
Contact phone number: 719-526-1694
Contact E-mail address: usarmy.carson.imcom-central.list.dpw-ed-storm-water@mail.mil

If a web site has been created with information on complying with your municipality’s construction and/or post-construction requirements, list the address: http://www.carson.army.mil/DPW/environmental/stormwater/index.html

D. Implementation of EPA’s Stormwater Management Program

The purpose of the annual report is to report on the status of your implementation of the permit requirements, including compliance with the standard of reducing the discharge of pollutants from your MS4 to the Maximum Extent Practicable (MEP). Address each of the following items for each of the six program areas:

1. Public education and outreach on stormwater impacts;
2. Public participation/involvement;
3. Illicit discharge detection and elimination;
4. Construction site stormwater runoff control;
5. Post-construction stormwater management in new development and redevelopment; and
6. Pollution prevention/good housekeeping for municipal operations

As the permittee, you must collect and maintain adequate information to demonstrate implementation of the six program areas as per your stormwater management program. Note that although the annual report only requires the submittal of certain information as outlined below, additional information may be requested by EPA to audit the implementation of your stormwater management program. For example, construction site inspection reports, outreach materials, and records of maintenance activities performed may be requested by EPA in addition to the annual report.

If another entity does not have its own permit but is instead covered under your permit, the annual report information under Section D of this form must also be provided for each such entity.
1. Public Education and Outreach on Stormwater Impacts

Provide the status of any measurable goal scheduled for completion during the reporting period or for which activities have begun. For program elements started, but not completed, any milestones that have been met must be indicated. If a change will be proposed to a BMP or measurable goal as part of the annual report, this must be stated and the proposed changes discussed. For each change proposed, you must provide information on:

1. The BMP/measurable goal for which a change is proposed;
2. Any proposed changes to the BMP description;
3. Any proposed changes to the measurable goals (including specific dates and measures); and
4. The rationale for the proposed changes.

Describe any measurable goal(s) for public education and outreach on stormwater impacts for the reporting period; including dates and numeric measures:

<table>
<thead>
<tr>
<th>Measurable Goal(s)</th>
<th>Status: Including dates and numeric measures</th>
<th>Changes proposed to BMP and/or Measurable Goal? (Yes/No)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Describe the methods, frequency, type, and target audience of stormwater outreach performed during the permit term.</td>
<td>Many stormwater outreach activities were conducted in 2013 as seen in Attachment 1. Personnel that live and work on Fort Carson were targeted in this program. Approximately 100 stormwater awareness brochures were distributed at events such as Earth Day, The Hazardous Household Waste Collection Day, Make a Difference Day, and others. Construction contractors were targeted with the training, “Fort Carson Stormwater Management at Construction Sites”, which was delivered 10 times with 80 people trained in 2013. Soldiers, civilians, and contractors were targeted with a stormwater awareness and training module in the Environmental Protection Officer (EPO) classes. This class was given 8 times in 2013. Fort Carson’s four elementary schools’ fourth and fifth graders participated in stormwater awareness activity that included poetry contests and hands-on activities. Fountain and Carson Middle Schools’ sixth graders participated in a hands-on stormwater activity. Finally, all personnel at Fort Carson were targeted with a stormwater article related to the importance of stormwater as a resource. This article was published in The Mountaineer, the Fort Carson newspaper that is distributed post-wide.</td>
<td>No.</td>
</tr>
</tbody>
</table>

3
| Provide a copy or representation of public outreach materials provided to the target audience(s). | See Attachment 2 for the Stormwater awareness brochure that is distributed to the target audience. Other educational material can be provided upon request. | No. |
| Provide copies of any educational materials, lesson plans, or presentations provided to school age students and other target audience(s) regarding stormwater runoff and water quality issues. | See Attachment 3 for an example of the educational material for the Environmental Protection Officer course. More is available upon request. | Yes. A “Name the Ditch” essay contest will be held, and participants will be directed to the public website for information. |
| Estimate the number of people expected to be reached by the program over each year of the permit term. | An estimated 1,248 people were reached directly by the Stormwater Program in 2013 as calculated on Attachment 1. Another 20,000 were reached via indirect means (newspaper article, website, etc.) A web counter has been installed on the public website. | No. |
| Provide the name or title of the person(s) responsible for coordination and implementation of the stormwater public education and outreach program. | Title: Stormwater Specialist | No. |

Narrative description. Provide any descriptions which may further describe the implementation of this minimum measure. Such narrative may include descriptions of efforts which overlap several minimum measures or descriptions of documents or programs which have been created in an effort to implement this minimum measure:

An article on the topic of stormwater as a resource was written for the post newspaper (The Mountaineer) for publication in March 2013. A second article outlining the educational activities that took place during Earth Day 2013 was published in May 2013. At the monthly Garrison Commander’s Sustainability Breakfast, the Stormwater Program at Fort Carson presented information regarding the efforts made in Low Impact Development on Fort Carson. Approximately thirty community members involved in community development, construction and sustainability attended this breakfast on March 13, 2013. A landscaping workshop, discussing workable vegetative stabilization methods was conducted by the Fort Carson stormwater Program on March 14, 2013. Approximately twenty-seven private contractors, USACE, DPW and Colorado Army National Guard representatives attended.
2. Public Participation/Involvement

Provide the status of any measurable goal scheduled for completion during the reporting period or for which activities have begun. For program elements started, but not completed, any milestones that have been met must be indicated. If a change will be proposed to the BMP or measurable goal as part of the annual report, this must be stated and the proposed changes discussed. For each change proposed, you must provide information on:

1. The BMP/Measurable goal for which a change is proposed;
2. Any proposed changes to the BMP description;
3. Any proposed changes to the measurable goals (including specific dates and measures); and
4. The rationale for the proposed changes.

Describe any measurable goal(s) for public participation and involvement on stormwater impacts for the reporting period; including dates and numeric measures:

<table>
<thead>
<tr>
<th>Measurable Goal(s)</th>
<th>Status: Including dates and numeric measures</th>
<th>Changes proposed to BMP and/or Measurable Goal? (Yes/No). If yes, provide information on proposed changes and rationale.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Document any events or other activities to clean up MS4 receiving waters.</td>
<td>“Make A Difference Day”, a national day of volunteering, was held on Oct. 26, 2013. Approximately 30 volunteers signed on to clean out trash and debris in B-Ditch; others cleared debris in the Central Unnamed Ditch and Clover Ditch. A post-wide Fall Clean-up was conducted concurrently; military units policed all areas in their control.</td>
<td>No.</td>
</tr>
<tr>
<td>Document any volunteer activities conducted to help actively engage residents and personnel at Fort Carson in understanding water resources and how their activities can affect water quality.</td>
<td>Storm drain stenciling was conducted in 2013 by volunteers. To date, about 80% of the installation’s storm drains have been stenciled. Fort Carson had a ditch clean up event staffed by volunteers. “Make A Difference Day” was an event used to work with about 30 volunteers to clean out trash and debris in B-Ditch. A breakfast was hosted by the Garrison Commander to discuss Fort Carson’s efforts to incorporate Low Impact Development. 30 public and military community members attended to provide input. Public participation events are recorded in Attachment 1.</td>
<td>Yes. A “Name the Ditch” essay contest will be held, and participants will be directed to the public website for information.</td>
</tr>
<tr>
<td>Provide the name or title of the person(s) responsible for coordination and implementation of the storm water public education and outreach program.</td>
<td>Title: Stormwater Specialist</td>
<td>No.</td>
</tr>
</tbody>
</table>
Public participation/involvement (continued)

Narrative description. Provide any descriptions which may further describe the implementation of this minimum measure. Such narrative may include descriptions of efforts which overlap several minimum measures or descriptions of documents or programs which have been created in an effort to implement this minimum measure:

At the annual Make A Difference Day volunteer event, 30 community members cleaned waterways and ditches on Fort Carson. All annual reports are available at building 1219. The storm drain stenciling program is executed by the Stormwater Specialist, and a current status is available upon request. A Landscaping workshop was held March 14, 2013, with private contractors as well as USACE engineers in attendance. A community presentation on Low Impact Development at Fort Carson was held March 13, 2013, with attendees offering input.
### 3. Illicit Discharge Detection and Elimination

Provide the status of any measurable goal scheduled for completion during the reporting period or for which activities have begun. For program elements started, but not completed, any milestones that have been met must be indicated. If a change will be proposed to the BMP or measurable goal as part of the annual report, this must be stated and the proposed changes discussed. For each change proposed, you must provide information on:

1. The BMP/Measurable goal for which a change is proposed;
2. Any proposed changes to the BMP description;
3. Any proposed changes to the measurable goals (including specific dates and measures); and
4. The rationale for the proposed changes.

Describe any measurable goal(s) for illicit discharge detection and elimination for the reporting period; including dates and numeric measures:

<table>
<thead>
<tr>
<th>Measurable Goal(s)</th>
<th>Status:</th>
<th>Changes proposed to BMP and/or Measurable Goal?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Including dates and numeric measures, as previously submitted</td>
<td>Including dates and numeric measures</td>
<td>(Yes/No). If yes, provide information on proposed changes and rationale.</td>
</tr>
</tbody>
</table>

Describe the program used to detect and eliminate illicit discharges into the MS4, including procedures for detection, identification of sources, and removal of non-stormwater discharges from the storm sewer system.

Describe the location and method of dry weather screening performed.

Describe illicit discharges located and all actions taken to eliminate sources of illicit discharges.

| The members of the Stormwater Team, the Environmental Compliance Assessment Team (ECAT), and EPOs are all trained to detect and identify illicit discharges to the storm sewer system. The Post has a spill plan which is followed to remove hazardous waste or other pollutant discharges. The Operations and Maintenance division of the MS4 removes other non-hazardous discharges. |
| A dry weather illicit discharge survey was conducted in the third quarter of 2013. Four watersheds are surveyed; B-Ditch, Clover Ditch (I-ditch), Central Unnamed Ditch and Rock Creek. |
| The dry weather illicit discharge survey was conducted in the third quarter 2013. Also, discharges are reported through the Stormwater Program website, and contact information is distributed during education and outreach events. The Stormwater Program encourages illicit discharge reporting through these avenues. Some discharges are responded to immediately. Trash, however, is taken care of during ditch clean up events and through service orders via the operations and maintenance division. Complete work is tracked in an excel spreadsheet. |

<table>
<thead>
<tr>
<th>Question</th>
<th>Response</th>
<th>Yes/No</th>
</tr>
</thead>
<tbody>
<tr>
<td>Describe training materials used and the frequency at which training was provided to the target audience(s) on how to respond to reports of illicit discharges.</td>
<td>This is met through the outreach and education tasks. See Minimum Control Measure 1 (MCM) for frequency information.</td>
<td>No.</td>
</tr>
<tr>
<td>Describe or cite the established ordinance or other regulatory mechanism used to prohibit illicit discharges into the MS4.</td>
<td>See Attachment 4, the Garrison Commander Policy. Balfour Beatty (Fort Carson’s housing management partner) has language in all rental agreements that prohibit illicit discharges.</td>
<td>No.</td>
</tr>
<tr>
<td>Provide a copy or excerpt from the information management system used to track illicit discharges.</td>
<td>See Attachment 5. All of the data on this form is entered into a database and marked on a map. The data can be exported and analyzed.</td>
<td>No.</td>
</tr>
<tr>
<td>Describe the categories of non-stormwater discharges evaluated as potentially being significant contributors of pollutants to the MS4 and any local controls placed on these discharges.</td>
<td>Sewer System upgraded in the northern portion of the Post. This is also addressed with MCM I and II.</td>
<td>No.</td>
</tr>
<tr>
<td>Describe occasional incidental non-stormwater discharges (See Part 2.4.6) and any controls placed on these discharges.</td>
<td>The list of allowable non-stormwater discharges is presented in the SWMP, and residents are encouraged to coordinate any future events with the Stormwater Program through educational activities. Everyone on Post is encouraged to wash their cars at one of the two car washes available. There have been a few charity car washes, and outside cooking events, and one known groundwater dewatering instance at a construction site. Dewatering guidance is given out during SWPPP reviews for construction.</td>
<td>No.</td>
</tr>
<tr>
<td>Describe hazardous waste collection events and summary data which generally covers what was collected.</td>
<td>Household hazardous waste (HHW) is accepted by the El Paso County Household Hazardous Waste Facility. Education activities documented earlier in the education and outreach section provides information to residents on this opportunity. A collection event was held on September 18, 2013. A total of 9,415 pounds of waste was diverted from a landfill. The following is a breakdown of what was collected: -Electronics: 2250 pounds -Latex paint: 3857 pounds -Automotive products: 894 pounds -Household toxic liquids and solids: 2414 pounds</td>
<td>No.</td>
</tr>
</tbody>
</table>
Additionally, 2,250 pounds of electronic waste was collected. Please refer to the P2 Times_Sept_2013_withHHWinfo for further details on this event.

In addition, Fort Carson has set up a Satellite Household Hazardous Waste Collection Site. The Exchange recycle drop-off location started accepting some common household hazardous waste products Oct. 1. The free service is available only to Soldiers and Families living on post who have orders to move to a new installation or are separating from the service. Products that can be dropped off at the Exchange recycle drop off include:

-- Household products: Aerosols, ammonia, batteries, bleach, cleaners (carpet, drain, oven and toilet), cooking and lamp oils, cosmetics, degreasers, deodorizers, floor cleaners/waxes, furniture polish/wax, laundry products, mothballs, rust removers, silver cleaners and spot removers.
-- Paint, stains, solvents, etc.: Latex, oil-based, aerosol and hobby paints; and lacquers, solvents, stains, strippers, thinners and varnishes.
-- Lawn and garden products: Lawn and houseplant fertilizers, herbicides, insecticides, pesticides, rodent poisons and wood preservatives.
-- Automotive products: Batteries, cleaners and wax.

Attendants are on duty at the Exchange recycle location to assist customers with the drop off of household hazardous waste and any other recycle needs. Only household, nonmilitary products can be brought in and containers must be labeled.

Please refer to the attachment 12 and 13 for further details.

The disposal of hazardous waste generated from training activities is coordinated through the Hazardous Waste Storage Facility (HWSF) on-post. Turning in waste to the HWSF requires training to ensure all their requirements are met. Records of waste are maintained on a daily basis, and are kept at the HWSF.
Maintain an inventory of industrial facilities that discharge into the MS4 or to waters of the United States within Fort Carson. The types of industrial activities that must be inventoried are set forth in 40 CFR §122.26(b)(14)(i) through (xi). This inventory must include the location of the activity, the location of its outfall and corresponding receiving water, and the NPDES permit status for its stormwater discharge.

Industrial discharges at Fort Carson are regulated under the Multi Sector General Permit. Through the requirements of this permit, industrial activities are tracked in a spreadsheet that includes a reference to the Stormwater Pollution Prevention Plan for the site (including location of the activity, location of the outfall and corresponding receiving water, as well as permitting information), exposed materials, monitoring requirements, and comments on the facility.

Illicit Discharge Detection and Elimination (continued)

Narrative description. Provide any descriptions which may further describe the implementation of this minimum measure. Such narrative may include descriptions of efforts which overlap several minimum measures or descriptions of documents or programs which have been created in an effort to implement this minimum measure:

All spill reports are kept on the Stormwater Program SharePoint site. Spill Reports have been analyzed and no trends can be identified.

When a spill does occur it is immediately reported to Fire Department and the Environmental Program then assists in clean up and ensure the site meets environmental standards. The nature of activities at Fort Carson elevates the risk of spills but staff is highly trained on spill response and clean up.

The storm sewer map is kept updated by the Fort Carson DPW Geographic Information System (GIS) team. A hard copy map is on the wall of the Stormwater Program Office.

Regarding flushing and sanitizing new water mains and building plumbing; Contractors are required to discharge these effluents to nearby sanitary or industrial sewers, or to truck the effluents to the installation wastewater treatment plant. Dechlorination of chlorinated effluents is required prior to discharge.
4. Construction Site Stormwater Runoff Control

Provide the status of any measurable goal scheduled for completion during the reporting period or for which activities have begun. For program elements started, but not completed, any milestones that have been met must be indicated. If a change will be proposed to the BMP or measurable goal as part of the annual report, this must be stated and the proposed changes discussed. For each change proposed, you must provide information on:

1. The BMP/Measurable goal for which a change is proposed;
2. Any proposed changes to the BMP description;
3. Any proposed changes to the measurable goals (including specific dates and measures); and
4. The rationale for the proposed changes.

Describe any measurable goal(s) for construction site stormwater runoff control for the reporting period; including dates and numeric measures:

<table>
<thead>
<tr>
<th>Measurable Goal(s)</th>
<th>Status:</th>
<th>Changes proposed to BMP and/or Measurable Goal? (Yes/No). If yes, provide information on proposed changes and rationale.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Including dates and numeric measures, as previously submitted</td>
<td>There were 45 active construction sites in 2013, varying in size, location, and activity. Many of these were small projects under an acre but others were large facilities, linear utilities and residential improvements and developments. These projects are owned and expedited by USACE, DPW, Balfour Beatty housing communities, and AAFES. Quarterly inspections were done on all projects over an acre that did not receive a Low Erosivity Waiver in 2013. The Stormwater Program includes BMP requirements for smaller projects via the NEPA process.</td>
<td>No, will continue for the duration of the permit term.</td>
</tr>
<tr>
<td>Describe “regulated construction activities” that occurred during the term of this permit.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Describe or cite the established ordinance or other regulatory mechanism used to require erosion and sediment controls.</td>
<td>See Attachment 4, the Garrison Commander Policy.</td>
<td>No.</td>
</tr>
<tr>
<td>Description</td>
<td>Details</td>
<td>Yes/No</td>
</tr>
<tr>
<td>-----------------------------------------------------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>--------</td>
</tr>
<tr>
<td>Describe the sanctions and enforcement mechanisms used to ensure that all “regulated construction activities” are in compliance with the terms of the Construction General Permit. This should include a description of any methods developed to stop work on construction sites in non-compliance independent of contracting procedures.</td>
<td>See Attachment 4, the Garrison Commander Policy. Also, the USACE actively supports the Stormwater Program by withholding money from contractors who fall out of compliance with the Construction General Permit.</td>
<td>No.</td>
</tr>
<tr>
<td>Describe the procedures for site plan review, including the review of pre-construction site plans, which incorporate consideration of potential water quality impacts and applicable contract language.</td>
<td>Every project goes through a NEPA review of which basic information on MS4 requirements and CGP requirements is given, and potential water quality impacts are assessed. The Stormwater Coordinator attends design review meeting for large projects to ensure water quality is addressed. In addition, a SWPPP review is conducted before the site is allowed to file its NOI for Construction General Permit coverage.</td>
<td>No.</td>
</tr>
<tr>
<td>Describe the procedures for receipt and consideration of information submitted by the public.</td>
<td>The Stormwater Office contact information is distributed to the public via the Stormwater Program website, brochures (see Attachment 1 for distribution intensity), and during presentations at community events (see Attachment 1 for events attended). The public is encouraged to call the spill line and / or e-mail the Stormwater office. Public comments are immediately considered and acted upon when appropriate.</td>
<td>No.</td>
</tr>
<tr>
<td>Describe the procedures for site inspection, including how sites will be prioritized for inspection, including documentation of the frequency of site inspections and methods for prioritizing site inspections.</td>
<td>All construction sites covered under the Construction General Permit are inspected quarterly by a member of the Stormwater team. If an inspection is not to the satisfaction of the Stormwater team member, more frequent follow up inspections are scheduled. Inspection reports are located in their respective project files and available upon request.</td>
<td>No.</td>
</tr>
</tbody>
</table>
Provide the name or title of the person(s) responsible for coordination and implementation of the construction site runoff control program.

| Title: Stormwater Coordinator | No. |

Narrative description. Provide any descriptions which may further describe the implementation of this minimum measure. Such narrative may include descriptions of efforts which overlap several minimum measures or descriptions of documents or programs which have been created in an effort to implement this minimum measure:

All construction projects are reviewed by a team of natural resources and environmental specialists during the NEPA project review process. If there is an issue or concern, it is addressed at that point. Basic information on MS4 requirements and compliance and CGP requirements are given at this time. In addition, a SWPPP review is conducted before the site is allowed to file its NOI for Construction General Permit coverage. All NEPA reviews are available upon request.

All construction related requirements and CGP compliance information has successfully been integrated into all RFPs. These RFPs include those sent out by USACE, DPW, AAFES, and Balfour Beatty housing communities.

Construction sites are required to have a dewatering plan in place prior to the start of construction. A review of this plan is conducted during the SWPPP review process. Additionally, construction contractors who must dewater a site are required to dewater on site using approved methods and are prohibited from discharging to storm sewers or ditches. We have created a guidance document and it is available on request.

Coordination between the Stormwater Program, USACE, DPW and other entities performing construction activities is conducted on a regular basis. These include monthly and weekly scheduling meetings and design reviews. We also provide a monthly Stormwater Management at Construction Site Training which is described in Section 1 (MCM1). We rely on Construction Representatives to be our eyes and ears in addition to the Fort Carson Stormwater program personnel’s constant drive by inspections. All Representatives have received Stormwater Management at Construction Sites Training.

All construction sites are inspected for permit compliance by the Fort Carson Stormwater personnel before the Notice of Termination (NOT) can be filed. The NOT inspection form is provided in the SWMP. Fort Carson DPW Environmental has additional personnel who are available to provide seeding, mulching and vegetation recommendations if conditions have not been met. Operations Support maintains all As-builts of facilities on Microstation software.
5. Post-construction Stormwater Management in New Development and Redevelopment

Provide the status of any measurable goal scheduled for completion during the reporting period or for which activities have begun. For program elements started, but not completed, any milestones that have been met must be indicated. If a change will be proposed to the BMP or measurable goal as part of the annual report, this must be stated and the proposed changes discussed. For each change proposed, you must provide information on:

1. The BMP/Measurable goal for which a change is proposed;
2. Any proposed changes to the BMP description;
3. Any proposed changes to the measurable goals (including specific dates and measures); and
4. The rationale for the proposed changes.

Describe any measurable goal(s) for post-construction stormwater management in new development and redevelopment for the reporting period; including dates and numeric measures:

<table>
<thead>
<tr>
<th>Measurable Goal(s)</th>
<th>Status: Including dates and numeric measures</th>
<th>Changes proposed to BMP and/or Measurable Goal? (Yes/No). If yes, provide information on proposed changes and rationale.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Describe the program that ensures the pre-development hydrology is met for new development and re-development projects as required in Part 2.6.1 and the mechanism used to review the adequacy of post-construction BMPs.</td>
<td>The site plan review process described in Section 4 of this report allows for a Stormwater Program review of projects and ensures pre-development hydrology requirements are met and post-construction BMPs are adequate. The Excess Urban Runoff Volume (EURV) calculations are used in designing post-construction, permanent BMPs to meet the requirements of EISA07. Refer to the Fort Carson SWMP for information. Additionally, contract language adequately addresses these requirements. All NEPA reviews are available upon request.</td>
<td>No.</td>
</tr>
<tr>
<td>The Stormwater Program Manager was an active participant in the development of the Colorado Springs Urban Drainage Criteria Manual. This Manual will be finalized in early 2014 and will be the guidance used to model and design Post Construction BMPs.</td>

<tr>
<td>Describe the program that ensures the long-term operation and maintenance of post-construction BMPs, including an excerpt from any data management system that includes maintenance requirements and schedules for post-construction BMPs installed during the year.</td>
<td>Fort Carson Operations and Maintenance (O &amp; M) Contractor does not have a contract requirement for a data management system currently but this is being investigated. The Stormwater Program performs annual inspections and maintains a database of the BMPs. The Contractor performs the repairs at this point and we are working on updates to the contract related to maintenance of Post Construction BMPs. See Attachment 10.</td>
<td>No.</td>
</tr>
<tr>
<td>Describe the process used to ensure that all DPW, Military Construction, and downrange contracts initiated after the effective date of the permit contain language which requires the installation of post-construction stormwater controls and an excerpt of applicable contract language.</td>
<td>The post-construction BMPs are required because of the EISA Section 438 in addition to this MS4 permit. This is incorporated in the Fort Carson SWMP and also in contract language that states, The Excess Urban Runoff Volume (EURV) calculations are used in designing post-construction, permanent BMPs to meet the requirements of EISA07. Refer to the Fort Carson SWMP for information. Additionally, contract language adequately addresses these requirements. All NEPA reviews are available upon request.</td>
<td>No.</td>
</tr>
<tr>
<td>Provide the name or title of the person(s) responsible for coordination and implementation of the post-construction stormwater management program.</td>
<td>Title: Stormwater Coordinator</td>
<td>No.</td>
</tr>
</tbody>
</table>
Post-construction Stormwater Management in New Development and Redevelopment (continued)

Narrative description. Provide any descriptions which may further describe the implementation of this minimum measure. Such narrative may include descriptions of efforts which overlap several minimum measures or descriptions of documents or programs which have been created in an effort to implement this minimum measure:

Requirements of the MS4 permit including EISA 438 were incorporated into request for proposal (RFP) language in 2013. In 2013 any project completed which impacted stormwater was reviewed during the NEPA process; these reviews are available upon request. Verification of each project meeting all CWA, NPDES and EISA Section 438 requirements is done during the NEPA reviews and is a partnership with numerous programs.

The NOT Inspection checklist is completed and in use. Construction reviews are conducted during all phases of construction, compliance for permanent stabilization and Post Construction BMP functionality is also achieved through the NOT inspection process. This document is available if needed. The landscaping, permanent stabilization, and post construction BMPs of each construction project is inspected for proper functionality before the NOT can be filed with the EPA. All As-builts and O & M specifications are given to the Fort Carson DPW Geographic Information System (GIS) team. As-builts turn-in was also verified in 2013 by the Stormwater Specialist.

Maintenance of Post Construction BMPs is being secured and funded under the DPW Operations and Maintenance contract. Negotiations are underway with the Fort Carson Housing contractor, Balfour Beatty, to ensure a regular maintenance program for the Post Construction BMPs on property leased by Balfour Beatty. The Stormwater Program will provide training and support for these projects.

There is a large amount of construction at Butts Army Airfield for the new Combat Aviation Brigade (CAB), considerable time has been devoted to planning and providing sufficient input into the design of new building, utilities and other facilities. Stormwater in this area will be managed with regional bioretention.

The Stormwater Program also participates in Fort Carson’s sustainability initiatives. We are working towards Net Zero goals for sustainable development and have provided technical support to the team working on implementation of this initiative. The Fort Carson Installation Design Guide was also updated in 2013, the Stormwater Program provided comments on this document to include guidance for landscaping, seeding, stabilization and Low Impact Development.
6. Pollution Prevention/Good Housekeeping for Municipal Operations

Provide the status of any measurable goal scheduled for completion during the reporting period or for which activities have begun. For program elements started, but not completed, any milestones that have been met must be indicated. If a change will be proposed to the BMP or measurable goal as part of the annual report, this must be stated and the proposed changes discussed. For each change proposed, you must provide information on:

1. The BMP/Measurable goal for which a change is proposed;
2. Any proposed changes to the BMP description;
3. Any proposed changes to the measurable goals (including specific dates and measures); and
4. The rationale for the proposed changes.

Describe any measurable goal(s) for pollution prevention/good housekeeping for municipal operations for the reporting period; including dates and numeric measures:

<table>
<thead>
<tr>
<th>Measurable Goal(s)</th>
<th>Status:</th>
<th>Changes proposed to BMP and/or Measurable Goal? (Yes/No).</th>
</tr>
</thead>
<tbody>
<tr>
<td>Describe the operation and maintenance program intended to prevent or reduce pollutant runoff from municipal operations, including a list of each of the activities evaluated under this program and a description of the controls for reducing or eliminating the discharge of pollutants from streets, roads, highways, parking lots, maintenance and storage yards, waste transfer stations, fleet or maintenance shops with outdoor storage areas, snow disposal areas, and salt/sand storage locations.</td>
<td>This will be a cooperative effort with the Stormwater Program, and Operations Division. Currently primary streets are swept monthly; secondary streets are swept every two months. Parking Lots are swept two times a year. Please refer attachment 9 for completed tasks. Snow removal and deicing is performed on a case by case basis. Street sweeping is conducted within 48 hours of deicing and snow removal activities. In 2013, approximately 136 requests were submitted. 71 of these requests involved cleaning out drop inlets, maintaining positive flow and making sure that culverts were less than 25% full of sediment. The work orders involved removing sediment in culverts and drainage ways. The O &amp; M Contractor looks for these issues on a weekly basis. 65 other requests included road maintenance and grading activities related to roads. Please refer to attachment 9 for further information. Bioretention and detention areas were assessed in 2013 and the Operation</td>

and Maintenance division will conduct required maintenance in 2014, high priority maintenance will be completed first. The language regarding maintenance of these structures will also be added to the O&M contractor’s contract. Please refer to attachment 10 and 11 for further information.

Additionally, the industrial maintenance and storage yards, waste transfer stations, and maintenance shops are permitted under the MSGP. This program includes training, inspections and monitoring at these sites. Results from inspections and monitoring events are used to prescribe future BMPs and good housekeeping efforts.

| Describe the contents and frequency of the training program for municipal personnel and a list of the personnel or positions trained during the term of the permit. | The O&M contractor is responsible for hiring qualified staff to perform maintenance activities. EPO training is provided regularly on Fort Carson (ten times per year). Various courses presented during the EPO training emphasize stormwater pollution prevention, to include “Pollution Prevention”, “Recycling at Fort Carson”, “Spill Response”, “Hazardous Waste Training”, “UST/AST Program”, “Environmental Performance Assessment System” and “Environmental Inspections”. See Attachment 3 for the slides from the stormwater module.

Personnel have and currently attend the training mentioned above. The list is extensive and available upon request.

In addition, stormwater pollution prevention is covered in more detail in the “Water Resources Management” course. The monthly stormwater management at construction sites course is open to any employees and contractors as well. | No. |
Describe the evaluation performed on the street cleaning operations, catch basin cleaning operations, and street sanding/salt practices and any measures taken as a result of the evaluation to minimize negative impacts to water quality.

Please refer to attachment 9 for these activities.

The MS4 water quality sampling efforts show that no parameters were in exceedance as it relates to O&M operations. Please refer to attachment 6 for this information.

No.
Pollution Prevention/Good Housekeeping for Municipal Operations (continued)

Narrative description. Provide any descriptions which may further describe the implementation of this minimum measure. Such narrative may include descriptions of efforts which overlap several minimum measures or descriptions of documents or programs which have been created in an effort to implement this minimum measure:

The DPW O&M Division contractor is required to be trained to properly handle applications of liquid and granular deicing and equipment operation.

The ECAT currently assesses any impacts to stormwater during their required monthly inspections and assists the stormwater program in corrective actions during the assessment of facilities. Stormwater language was permanently integrated into the ECAT inspection process in 2011. Many of these requirements are also met by activities conducted for MSGP compliance. Temporary BMPs are always used during maintenance, and training and inspections are conducted often.

Coverage of materials in storage areas presents a challenge to cover due to cost and accessibility issues. Temporary stormwater BMPs, good housekeeping measures and inspections are employed to mitigate any potential pollutants from entering the storm sewer system. Granular deicing product is always stored in a covered environment. Liquid deicing agent is stored according to manufacturer’s specifications along with Stormwater Best Management Practices.
E. Results of Information Collected and Analyzed.*

If you have collected and/or analyzed information during the reporting period, including any monitoring data used to assess the success of the program at reducing the discharge of pollutants, submit a short summary of the information and any analysis completed.

Summary

Surface water sampling required by the SWMP was contracted and completed in 2013. This sampling evaluates the 4 major cantonment drainages (B-Ditch, Clover Ditch, Central Unnamed Ditch, and Rock Creek) above and below Fort Carson. The sampling effort detected *E. coli* and selenium in some areas. Results from the last two years will determine the MS4’s contribution of pollutants to receiving waters and will drive future management decisions; please see spreadsheet of prior years sampling results (Attachment 7). Continued monitoring is planned for 2014 as per requirements of the MS4 permit. Attachment 6 includes the entire data collected for the 2013 surface water sampling effort. In 2015, we hope to complete surface water sampling in house and will be requesting a reduction in sampling to biannually or annually. The basis for this request is that collected data has shown minimal constituents of concerns.

Fort Carson also samples four locations for compliance under the MSGP. That data is also available upon request.

Fort Carson has completed the Benthic Macro invertebrate Study and associated Streambank Stabilization Report, and has received a letter of no further action form the USEPA Wastewater Unit.

*Data collected to audit the implementation status of a program element does not need to be reported in the annual report unless required by an established measurable goal or as a requirement or result of an inspection or enforcement action. For example, data such as street miles swept, visitors at an information booth, or visits to a web site do not need to be included in the annual report unless directly related to a measurable goal or committed to be reported and/or analyzed in a program description.*
### F. Summary of Inspections and Enforcement Actions.

Provide a summary of the number and nature of inspections and formal enforcement actions performed. Site-specific information may also be included, but is not required.

<table>
<thead>
<tr>
<th>Program Area</th>
<th>Description of Enforcement Actions/ Inspections</th>
</tr>
</thead>
<tbody>
<tr>
<td>Construction Site Stormwater Runoff</td>
<td>Fort Carson inspected approximately 45 major construction sites during 2013. These inspections included documentation review and a thorough site walkthrough.</td>
</tr>
<tr>
<td>Control</td>
<td>Enforcement actions included verbal warnings with follow up inspections from the stormwater inspector, verbal warnings from the Compliance Branch Chief on more difficult sites, and finally verbal and written warnings to the contracting officer on one site.</td>
</tr>
<tr>
<td></td>
<td>Additionally, the Stormwater Management at Construction Sites Trainings has been extremely successful. Approximately 80 Contractors, USACE construction representatives, and DPW Engineering and Environmental personnel have attended.</td>
</tr>
<tr>
<td></td>
<td>The USEPA audited the compliance program for Fort Carson’s MS4 permit in 2013. There were two minor findings which included; failure to use a watershed modeling process in the SWMP, and failure to ensure long term operations and maintenance for Post Construction BMPs (due to lack of manpower). These findings have been addressed. The spreadsheet for this assessment is attached. Please refer to the language above on status on Post Construction BMP maintenance.</td>
</tr>
<tr>
<td></td>
<td>The new MS4 permit will be issued in 2014 we have also supplied comments for this and will conduct a review when the draft is received.</td>
</tr>
<tr>
<td>Industrial Sites Permitted Under MSGP</td>
<td>Industrial sites permitted under the MSGP were inspected comprehensively (annually) and routinely (quarterly). Industrial sites (mostly motor pools) were visually inspectioned as per MSGP requirements. Analytical samples were collected at four sites as required under the MSGP. Newly constructed sites where incorporated into the program. ECAT inspections of these sites also occur one time per month. Enforcement actions through ECAT are reported and logged internally, and involve follow up actions and inspections. Reports and inspection records are available upon request.</td>
</tr>

G. Proposed Changes to the Stormwater Management Program.

Provide a narrative description of any changes or additions to the stormwater management program.

H. Notice of Program Element Operation by a Second Party.

Another government entity may be relied on to perform requirements of your MS4 permit. However, as the permittee, you remain liable for compliance with the terms of the permit if the requirements are not fulfilled. You must complete this annual report for the geographic areas covered under your permit, for all program areas, even if one or more program elements/areas is being performed by another entity. (However, if you are performing a program element for another permittee, you do not need to include that activity in this report.) If you are relying on another government entity to satisfy some of your permit obligations (and if the information has not been previously provided to the EPA in earlier reports or the application), the annual report must include a statement to that effect. If the BMP and/or measurable goal will be modified in addition to the change of operator to another government entity, the change must be included in Item G, above. Example statement: “As of September 15, 2003, Monroe County is performing the construction site plan reviews for the Nixon Air Force Base in accordance with the procedures in the Base’s original application.”
